Business challenge

- Supply chains are complex and inefficient
- Lack a structured approach to identify process gaps
- Misalignment between processes and business goals
- Need for a solution that provides a clear, actionable roadmap for continuous improvement

Problem

- Disconnected processes and undefined roles
- Underutilized metrics and misaligned operations
- Difficulty identifying inefficiencies and root causes
- Lack of a clear roadmap for continuous improvement

Impact

- Increased operational costs and longer lead times
- Reduced service levels and customer satisfaction
- Missed growth opportunities and competitive edge
- Limited profitability and long-term sustainability

Solution

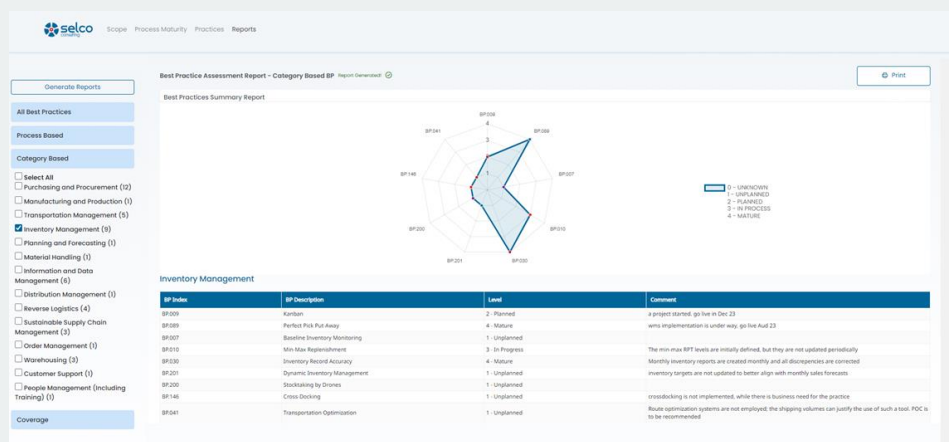

- SCORGUIDE™ combines SCOR DS reference model and proven transformation methodologies
- Automates process assessment, disconnect discovery, and root cause analysis
- AI agent provides actionable insights and best practices to optimize processes
- AI agent builds roadmaps for supply chain transformation and skill build-up

Results

- Enhances process visibility and identifies inefficiencies
- Automates best practice recommendations
- Quickly aligns processes with industry standards
- Drives measurable operational improvements
- Creates standard maturity reports across processes, best practice pillars

Benefits

- A standard and accelerated workflow for transformation agents
- Improves operational resiliency and reduces costs
- Aligns with best practices for continuous improvement
- Drives growth, competitiveness, and customer satisfaction

At our Ankara R&D Lab, SELCO experts develop innovative technological products that address the unique and sophisticated challenges of various industries. Our solutions leverage applied science, advanced data analytics, and best practices to help supply chain professionals identify the root causes of inefficiencies and create initiatives that generate lasting impacts.
